

Project Design Phase

Proposed Solution Template

Project Name: ServiceNow-Based Employee Laptop Request Application

Maximum Marks: 2 Marks

S.No.	Parameter	Description
1	Problem Statement (Problem to be solved)	Employees need a simple and structured way to request laptops and related equipment. Manual or unorganized request handling can make it difficult to collect complete request details, obtain approvals, track progress, and maintain a consistent service process.
2	Idea / Solution description	The proposed solution is a ServiceNow-based Employee Laptop Request Application. A user submits a laptop request through an Employee Service Catalog record producer by providing the required request details. The request is processed through a configured ServiceNow flow so that the approval and request-handling process is organized, traceable, and easier to manage.
3	Novelty / Uniqueness	The solution combines a self-service catalog experience with workflow-based request processing in ServiceNow. It standardizes laptop requests, reduces dependence on manual communication, and provides a centralized record of each request and its status.
4	Social Impact / Customer Satisfaction	The application improves the employee experience by providing a clear and convenient way to submit laptop requests. It can reduce confusion and repeated communication while helping the responsible team process requests in a more transparent and consistent manner.
5	Business Model (Revenue Model)	This is primarily an internal enterprise service solution rather than a direct revenue-generating product. Its business value comes from improving service efficiency, reducing manual effort, standardizing request handling, and improving visibility into employee laptop requests.
6	Scalability of the Solution	The solution can be extended beyond laptop requests to other employee services such as desktop requests, software access, accessories, IT support, and other service catalog requests. Additional catalog items, fields, approvals, and workflows can be configured within ServiceNow as organizational requirements grow.
